

# BRIAN OLSEN

PHOTOGRAPHER • VISUAL AI EVALUATOR • PROMPT & MODEL-OUTPUT ANALYST

Oxnard, CA | Remote Contractor | (805) 500-8865 | [brian@olsenautomation.com](mailto:brian@olsenautomation.com)  
[olsenautomation.com/visual-ai-evaluation.html](https://olsenautomation.com/visual-ai-evaluation.html) | [brianvincentphotography.com](https://brianvincentphotography.com)

## PROFESSIONAL PROFILE

Professional photographer and independent business owner with 13+ years of experience making precise visual judgments, communicating with clients, and delivering usable work under real-world constraints. Hands-on experience designing complex prompts, comparing AI-generated image outputs, checking results against references, identifying unsupported invention and visual artifacts, and refining instructions for product fidelity, realism, and commercial usefulness. Strong independent research, written explanation, and quality-control skills.

## CORE QUALIFICATIONS

|                                    |                                     |                                      |
|------------------------------------|-------------------------------------|--------------------------------------|
| Visual analysis & image evaluation | Prompt design & instruction testing | Model-output comparison & ranking    |
| Reference fidelity & fact-checking | Photography, lighting & composition | Independent research & clear writing |

## RELEVANT EXPERIENCE

### AI-Assisted Product Image Production Portfolio | Independent Proof-of-Concept

2026

Work

- Built a repeatable reference-to-result workflow: analyze source truth, write constraint-based prompts, inspect model output, document defects, and iterate toward a defined visual standard.
- Created a CPG repair study reconstructing a damaged Twizzlers Strawberry package while preserving front-package logic, material behavior, proportions, clear window, crimped ends, and brand-identifying structure.
- Produced a wearable-tech spec study from casual smart-ring photographs, evaluating geometry, matte/polished material contrast, sensor form, lighting, shadow behavior, and unsupported model invention.
- Evaluated outputs for instruction adherence, reference fidelity, physical plausibility, typography/detail risk, artifact severity, and commercial usability; documented why a result passed, failed, or required revision.

### Brian Vincent Photography | Owner / Photographer / Retoucher

2011–Present

- Operate an independent photography business serving Ventura County; manage client communications, scheduling, contracts, invoicing, records, editing, delivery, and issue resolution without direct supervision.
- Apply composition, lighting, color, perspective, edge-quality, and narrative judgment across portraits, weddings, events, and commercial product imagery.
- Photographed Mister Softee SoCal product/menu assets on location using a portable white-box setup, then manually masked, cleaned, color-corrected, and prepared images for display use.
- Translate ambiguous client goals into concrete visual decisions and explain recommendations clearly to clients with different levels of technical knowledge.

### Young's Market Company / RNDC | Territory Sales Representative

Jan 2017–Sep 2025

- Independently managed 20+ retail accounts across three territories in Ventura and Los Angeles Counties, balancing route planning, reporting, merchandising, promotions, and account relationships.
- Produced accurate written recaps of account conditions, operational issues, priorities, and completed work; verified details before reporting to management and partner teams.
- Corrected retail documentation imagery by compositing missing signs or product facings while matching perspective, scale, shadows, lighting, and color so edits remained visually credible.

## SELECTED VISUAL AI EVALUATION METHOD

---

**1 DEFINE THE STANDARD** Convert the request into observable requirements and distinguish mandatory constraints from aesthetic preferences.

**2 INSPECT THE EVIDENCE** Study reference images for geometry, material, lighting, text, context, and details the model must not invent.

**3 COMPARE OUTPUTS** Judge instruction adherence, accuracy, realism, artifacts, omissions, and usability—not merely which image is prettier.

**4 EXPLAIN & ITERATE** Write a concise evidence-based rationale, identify the highest-impact failure, and revise the prompt without introducing new contradictions.

## ADDITIONAL EXPERIENCE

---

**Bank of America** | Sales & Service Specialist

**Prior Experience**

- Handled high-volume customer interactions and financial transactions with accuracy, confidentiality, careful documentation, and professional written and verbal communication.

## TOOLS & WORKING SKILLS

---

**Visual & production:** Adobe Photoshop, Camera Raw, manual masking, compositing, background cleanup, color and perspective correction, product photography, AI-assisted image generation/editing.

**AI evaluation:** Prompt engineering, reference-based critique, rubric design, output ranking, artifact detection, hallucination/unsupported-detail identification, iterative correction, creative-director QA.

**Business & systems:** Independent project management, client communications, research, fact-checking, reporting, macOS, Windows, Microsoft Office, web-based tools.

## EDUCATION

---

**John A. Rowland High School — Diploma, 2002** | **Additional college coursework**

## PORTFOLIO DISCLOSURE

---

*Spec and proof-of-concept examples are independent demonstrations and are not official brand assets or client commissions unless explicitly identified. Brand references are used to demonstrate reference fidelity, model evaluation, and correction judgment.*
